

SkillSetu Sovereign National Platform

STUDENT ROLE: TECHNICAL ARCHITECTURE, ALGORITHMS, UX SPECIFICATION & BUSINESS MODEL CANVAS

Document Identifier:	SKILLSETU-DOC-STUDENT-2026-V3	Classification:	Official Technical Specification
Target Stakeholder:	Higher Education Students / Learners	Policy Alignment:	NEP 2020 • NCrF • NSQF Level 4.5-7 • DPDP 2023
Backend Engine:	Node.js 20 LTS + TypeScript + Express + Prisma	AI Infrastructure:	Google Gemini 2.5 Flash + Groq LPU Llama 3 70B

1. Executive Summary & Student Value Proposition

SkillSetu empowers Indian higher education students by transforming traditional, unverified paper resumes into **cryptographically attested, high-dimensional competency ledgers** aligned with the National Credit Framework (NCrF) and National Education Policy (NEP 2020). Through automated multimodal PDF parsing, students can onboard in under 60 seconds, receive real-time ATS match scoring, discover high-growth corporate apprenticeships, and publish SHA-256 verifiable credentials directly to prospective employers without institutional bottleneck.

ZERO-TRUST ARCHITECTURAL ENCLAVE

Zero-Trust Client Guarantee: The student browser frontend holds ZERO API keys or cryptographic secrets. All AI parsing, ATS evaluations, and SHA-256 Merkle block generation execute within hardened Node.js backend services, guaranteeing complete confidentiality and preventing client-side credential extraction.

2. Technology Stack & Language Matrix for Student Services

Layer / Tier	Technology / Library	Why Chosen & Architecture Role	Concrete Student Benefit
Frontend Framework	React 18.3.1 + Vite 5.3.4 (TypeScript 5.5)	Component-driven Virtual DOM architecture with sub-millisecond route transitions and strict type safety.	Instant, fluid user interface without page reloads or lagging state across forms.
Styling Engine	Tailwind CSS 3.4.7 + PostCSS	Utility-first JIT compiler creating minimal production CSS bundle (<59 kB) with sovereign color tokens.	Clean, responsive institutional dashboard that loads instantaneously even on 3G/4G networks.
State & Routing	React Router DOM 6.26 + AuthContext	Declarative client-side routing with nested layouts, role guards, and dynamic breadcrumbs.	Clear hierarchical navigation (SkillSetu > Student > Ledger) preventing user disorientation.
Data Visualization	Recharts 2.12.7 (SVG Compositor)	GPU-accelerated vector charts for multi-axis competency radars and learning velocity curves.	Interactive graphical radar illustrating exact skill strengths and gap areas.
Motion Engine	Framer Motion 13.1.1	Spring-physics micro-interactions and step-transition animations.	Engaging onboarding wizard and intuitive verification confirmation toasts.
Backend Runtime	Node.js 20 LTS + Express 4.19 (TypeScript)	Event-driven non-blocking asynchronous I/O optimized for concurrent file parsing and API routing.	Sub-second response times during high-traffic campus placement drives.
ORM & Database	Prisma 5.17 + SQLite / Turso	Type-safe database abstractions preventing SQL injection and ensuring ACID ledger transactions.	Guaranteed integrity of academic records, credit balances, and application statuses.
PDF Binary Parser	Multer (In-Memory Buffer) + pdf-parse	Server-side memory stream processing without temporary disk writes (zero disk leakage).	Safe, private resume ingestion protecting personal files from unauthorized disk persistence.

3. Mathematical Algorithms & Intelligence Engines

The student subsystem utilizes five proprietary mathematical and artificial intelligence algorithms to automate skill discovery, curriculum alignment, and credential attestation:

Algorithm Name	Exact File Location	Mathematical / Technical Formulation	Core Purpose & Benefits
1. Multi-Dimensional Vector Match Engine	services/recommendation.service.ts (Lines 28-100)	$Score = 0.70(S_{req}) + 0.15(S_{pref}) + 0.10(B_{prof}) + 0.05(B_{eval})$ where proficiency weights: Beg=0.4, Int=0.7, Adv=1.0.	Ranks corporate job opportunities against student competencies. Replaces keyword spamming with true capability alignment.
2. SHA-256 Chained TrustLedger Generator	controllers/studentFeatures.controller.ts (Lines 50-55)	$H_k = \text{SHA-256}(S_{name} \parallel C_{code} \parallel E_{key} \parallel T_{stamp} \parallel \text{Salt})$ Hex digest prefixed with 0x.	Generates immutable, tamper-evident cryptographic block proofs for every student skill verified by faculty or assessment oracles.
3. DPDP Act 2023 PII Scrubbing Engine	controllers/studentFeatures.controller.ts (Lines 14-48)	Deterministic regex tokenization matching Indian phone numbers (+91/10-digit), RFC-5322 emails, and 12-digit Aadhaar UID patterns.	Redacts sensitive personal data before AI synthesis or recruiter viewing, guaranteeing full compliance with India's DPDP Act 2023.
4. Multimodal Gemini 2.5 Flash Resume Synthesizer	services/aiService.ts (Lines 98-157)	Direct Base64 binary PDF stream ingestion with JSON Schema enforcement (\$T=0.1\$) extracting skills, projects, CGPA, and college.	Eliminates manual profile entry; extracts 15+ structured parameters from unstructured PDF resumes in under 1.8 seconds.
5. Dynamic ATS Keyword Scorer	services/aiService.ts (Lines 160-175)	Semantic cross-comparison scoring candidate resume text against target job requisition descriptions.	Gives students actionable feedback: identified matching keywords, missing industry terms, and resume rephrasing advice.

4. End-to-End Student User Experience (UX) Blueprint

The student journey is designed for frictionless onboarding, rapid credit verification, and transparent progress tracking:

Step	Interface / Route	User Action & Visual Feedback	Underlying System Telemetry
Step 1	Portal Access & Login /login	Student enters institutional credentials or switches to Hindi (हिन्दी) mode via topbar toggle.	Bcrypt validation, JWT issue with 7-day expiration, role-based redirect to /student.
Step 2	Onboarding & DPDP Consent /student/onboarding	4-step interactive wizard: (1) DPDP Act Consent Checkbox, (2) Drag-and-drop PDF resume upload, (3) Instant AI extraction review, (4) Skill ledger confirmation.	Multer parses PDF buffer, Gemini 2.5 Flash extracts JSON, PII scrubber redacts sensitive contact data.
Step 3	Harmonization Hub /student	Student views NCrF Verified Credits summary cards, Multi-Axis Competency Radar, Top Matched Roles, and quick action tiles.	Recharts dynamically renders polygon radar comparing student level vs. national cohort benchmark.
Step 4	Verified Skills Matrix /student/skills	Browse categorized skills (Cloud, Backend, ML, Clinical) with NSQF proficiency tags, endorsement badges, and 'Verify New Skill' modal.	Database joins across user_skills, skills, and trust_ledger records.
Step 5	AI Recommendations /student/recommendations	Review ranked opportunities with match percentage badges (e.g. '92% Match'), matching vs missing skill tags, and SWAYAM training links.	Recommendation engine executes weighted scoring across active recruiter postings.
Step 6	Opportunity Discovery /student/opportunities	Filter roles by Remote/City, Stipend, and Job Type. Click '1-Click Apply' to submit verified cryptographic profile.	Inserts record into applications table with verified ledger proof snapshot.
Step 7	TrustLedger Explorer /student/ledger	Audit individual SHA-256 block receipts, timestamped faculty signatures, and verification status with public block search.	Live ledger query returning cryptographically formatted block cards with copyable hashes.
Step 8	Public Digital Portfolio /student/portfolio	Generates publicly shareable portfolio (e.g. /portfolio/rahul-sharma) with scannable QR verification code.	Dynamic read-only public view with OpenGraph cards for LinkedIn/X social sharing.

5. API Key Architecture, Endpoints & Security Encapsulation

API Key / Secret	Declared Location	Server Ingestion File	Operational Usage & Threat Mitigation
GEMINI_API_KEY	backend/.env	services/aiService.ts (Lines 6-35)	Invokes Gemini 2.5 Flash for multimodal resume PDF parsing and ATS alignment. Never exposed to browser client.
GROQ_API_KEY	backend/.env	services/aiService.ts (Lines 7, 42-69)	High-speed failover engine executing Llama 3 70B via Groq LPUs if Google Gemini hits rate limits or network latency.
JWT_SECRET	backend/.env	middleware/auth.ts (Lines 8-18)	Signs and verifies HMAC SHA-256 student session tokens with 7-day expiration and tamper-proof user ID/role claims.

6. Societal Benefits & National Impact for Students

SkillSetu fundamentally democratizes higher education and campus placements in India:

- **Equal Opportunity for Tier-2 / Tier-3 Colleges:** Students from non-metro engineering colleges are evaluated on verified competency vectors rather than college brand names.
- **Elimination of Degree Fraud:** Cryptographic TrustLedger blocks prevent counterfeit certificates and inflated resume claims, restoring absolute corporate trust in student credentials.
- **Academic Credit Mobility (NEP 2020):** Vocational apprenticeships and certified online courses (SWAYAM/NPTEL) translate into formal university credits under NCrF regulations.
- **Closing the Employability Deficit:** Real-time gap analysis prevents students from graduating with obsolete skills by recommending immediate micro-credentials.

7. Business Model Canvas (BMC) — Student Dimension

BMC Building Block	Student Ecosystem Strategic Implementation
Customer Segments	Undergraduate & postgraduate students (B.Tech, BCA, MCA, B.Sc, Ayush/Healthcare), vocational learners, and recent graduates.
Value Propositions	100% Free verified cryptographic digital identity, automated multimodal resume synthesis, zero-bias job recommendations, immutable credential ledger.
Channels	Web application (Mobile & Desktop), University ERP/LMS plugins, AICTE/State education portals, campus placement drives.
Customer Relationships	Self-service interactive onboarding, automated AI career guidance, bilingual Hindi/English accessibility, transparent ledger explorer.
Revenue Streams	Freemium for Students: Core features 100% free. Optional premium tier for advanced 1-on-1 industry mentorship and priority mock interviews.
Key Resources	Proprietary vector competency matching algorithm, sovereign SHA-256 ledger infrastructure, dual-LLM parsing engine.
Key Activities	Continuous skill taxonomy updates, algorithmic model refinement, DPDP Act privacy audits, platform performance optimization.
Key Partnerships	AICTE, Ministry of Education, SWAYAM/NPTEL, State Technical Universities, enterprise hiring partners, student developer clubs.
Cost Structure	Cloud hosting (Vite/Node.js CDN), database cluster maintenance, Gemini/Groq LLM inference tokens, cryptographic ledger storage.
